

OUT580R/OUT580RM 油位控制器 Oil Level Regulator

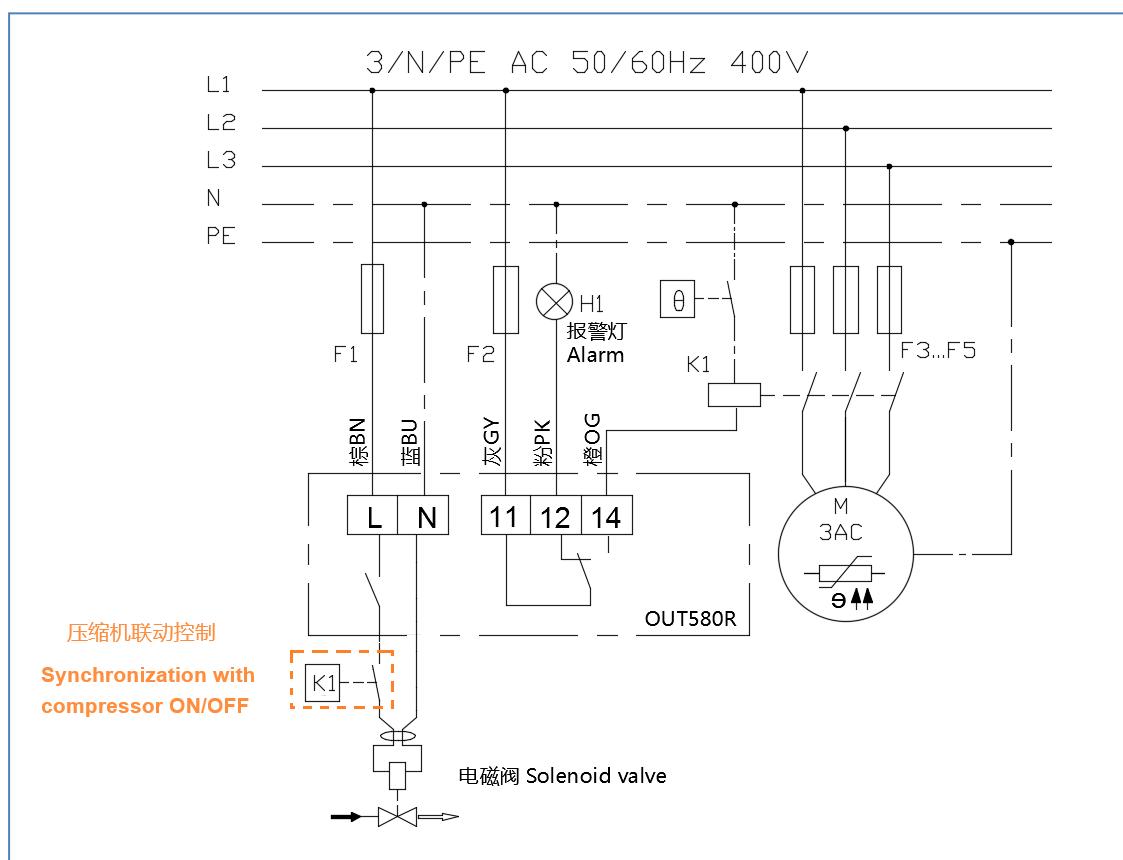

OUT580R 油位控制器利用摆臂原理监测油位,把实际的油位通过高精度霍尔传感器反馈给微处理器,油位控制器内设二个油位点,分别为电磁阀动作补油点与报警点,油视镜内油位下降到补油点时延时输出电压开启外置电磁阀;下降到报警点时延时报警。其输出干接点可直接接入控制电路中。

OUT580R 在接通电源后报警继电器吸合,上部 LED 为绿色或橙色。当油位低于视镜约 40% 时,下部 LED 黄色点亮,延时输出电压开启外置电磁阀补油;油位回升到 55% 时,关闭电磁阀停止补油,同时下部黄色 LED 灭,当油位低于 25% 时,上部 LED 指示灯变为橙色,同时延时 120 秒计时启动,延时时间到报警继电器输出断开,上部橙色指示灯变成红色。

当油位恢复后(高于 30%),报警继电器再次吸合,并上部 LED 变为绿色。

OUT580R uses a Hall-Sensor to measure the oil level. A magnetic float changes its position according to the oil level, not prone to errors by foaming or light. The hall sensor converts these magnetic field changes into an equivalent signal, which is used by the electronic controller to open or close an external solenoid valve which feeds missing oil directly into the compressor sump. If the oil level drops into the red zone the OUT580R generates an alarm signal and the alarm contact (SPDT) changes into alarm state. The latter may be used to shut down the compressor. In the Alarm status the OUT580R is still feeding oil into the compressor. If the oil level comes back to normal, the Alarm will be reset.

接线原理图 Wiring diagram1

注：“压缩机联动控”尽管对于大多数低压腔压缩机来说并不是必须的，但是增加联动控制可以提高主动回油系统可靠性。
当用于高压腔涡旋压缩机及内置油分螺杆压缩机时，压缩机停机时不得补油，也可以断开控制器电源并屏蔽油位故障信号检测，具体可以联系本公司工程师。

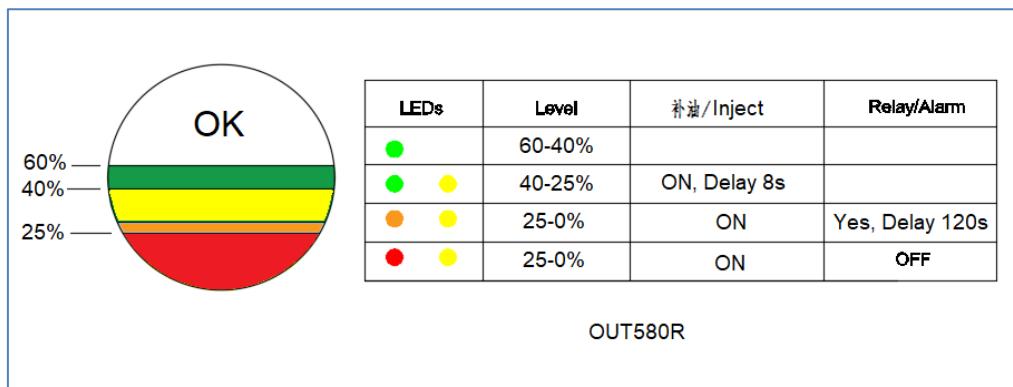

Note: "Synchronization with compressor ON/OFF" Although not necessary for most low-pressure chamber compressors, but the addition of linkage control can improve the reliability of the active return system.

When used in high pressure cavity scroll compressor and built-in oil separation screw compressor, oil filling can only be carried out when the compressor is running. When the compressor is shut down, please disconnect the power supply of the controller and shield the oil level.

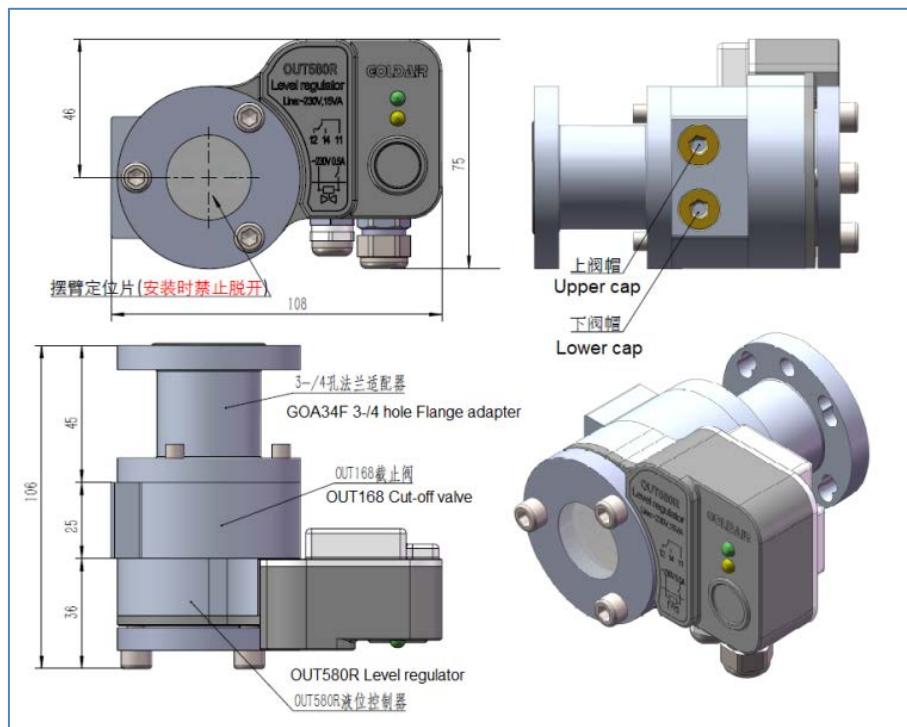

技术参数 Technical Data

供电电压 Supply voltage	AC 50/60Hz 230V±15%15VA
环境/储存温度 Ambient/Storage tem.	-40...+60°C
介质温度 Medium temperature	-20...+100°C
最高工作压力 Max. working pressure	45bar(OUT580R);60bar(OUT580RM)
保护等级 Protection class (EN 60529)	IP65
延时 Delay	补油延时 Time Delay Filling: 8S±2S 报警延时 Time Delay Alarm: 120S±10S
电磁阀 1 Solenoid valve 1 for OUT580R 最高工作压力 Max. working pressure 45bar 功率 接口 Oil connection	最大压差 MOPD: 31bar Flow rate at $\Delta P=3.5\text{bar}$, H ₂ O, 3.2L/min (SV20F-2) 13VA @ AC 50/60Hz 230V 1/4" -SAE (7/16" -20UNF)

OUT168 液位截止阀 (选配) Cut-off valve (Optional)

OUT168 液位截止阀用于油路闭锁。装在油位控制器与适配器之间，在检修需要时可以关闭液位截止阀，对油位控制器进行维修更换，而不需要对压缩机中液体泄压放空。

1、外螺纹适配器安装：松开 OUT168 液位截止阀上的三颗 M6 内六角螺栓，使适配器在三孔夹板内能自由旋转，把带有密封垫圈的适配器拧紧至油视镜孔上，确保密封，扭矩不超过 75N.M；然后把三孔夹板的缺口对准 OUT168 液位截止阀背部的标记处，套上三颗 M6 螺栓，整体把截止阀调整至水平位置（阀帽在左边），水平度不超过±1°，把螺栓拧紧（注意连接处的 O 型圈安装到位）。

2、法兰适配器或旋转锁定适配器安装时，直接把 OUT168 调节至水平±1°，并阀帽朝左，拧紧螺丝。

3、OUT168 液位截止阀出厂时为打开状态，当需要时，先拆下阀帽，再把上下 2 个截止阀阀芯顺时针拧紧至完全关闭，可以把油位监视器拆下检修，完成检修固定好油位监视器后，再把 2 个截止阀阀芯逆时针旋转 4 圈左右（不得超过 5 圈）至完全打开状态，然后再次把阀帽完全拧紧至永久密封。

OUT168 Cut-off valve is utilized as oil circuit blockage, and installed between oil level regulator and adapter, which could be switched off when maintenance needs and replacement of oil level regulator. And it is not necessary to drain the oil within the compressor.

1. Install OUT168 Cut-off valve horizontally, and valve cap on the left, tighten bolts.

2. OUT168 cut-off valve is defaulted as open status when out factory.

3. When it needs technique maintenance, Firstly, remove the valve cap, and then tighten the upper and lower valve spool clockwise until completely close, and then remove oil level monitor to maintenance, keep oil level monitor in place after maintenance, then turn the spool of the two stop valves anticlockwise about 4 rounds (not exceeding 5 rounds) to the completely open status. Ultimately, tighten the valve cap completely again to a permanent seal.

应用说明 Application Considerations

1、储油式油分（或者储油器）的油路出口请依次安装截止阀、300 目（50um）精过滤器，以免杂质进入造成电磁阀卡死漏油，与电磁阀进口连接的支管宜用Φ6.35x0.8 铜管。电磁阀出口与压缩机注油口连接可以选用Φ4mm 以上内孔的软管。

The oil outlet of the oil storage type (or oil storage device) should be installed in turn with the cut-off valve and 300 mesh (50um) fine filter to avoid the impurities entering the solenoid valve and causing oil leakage.

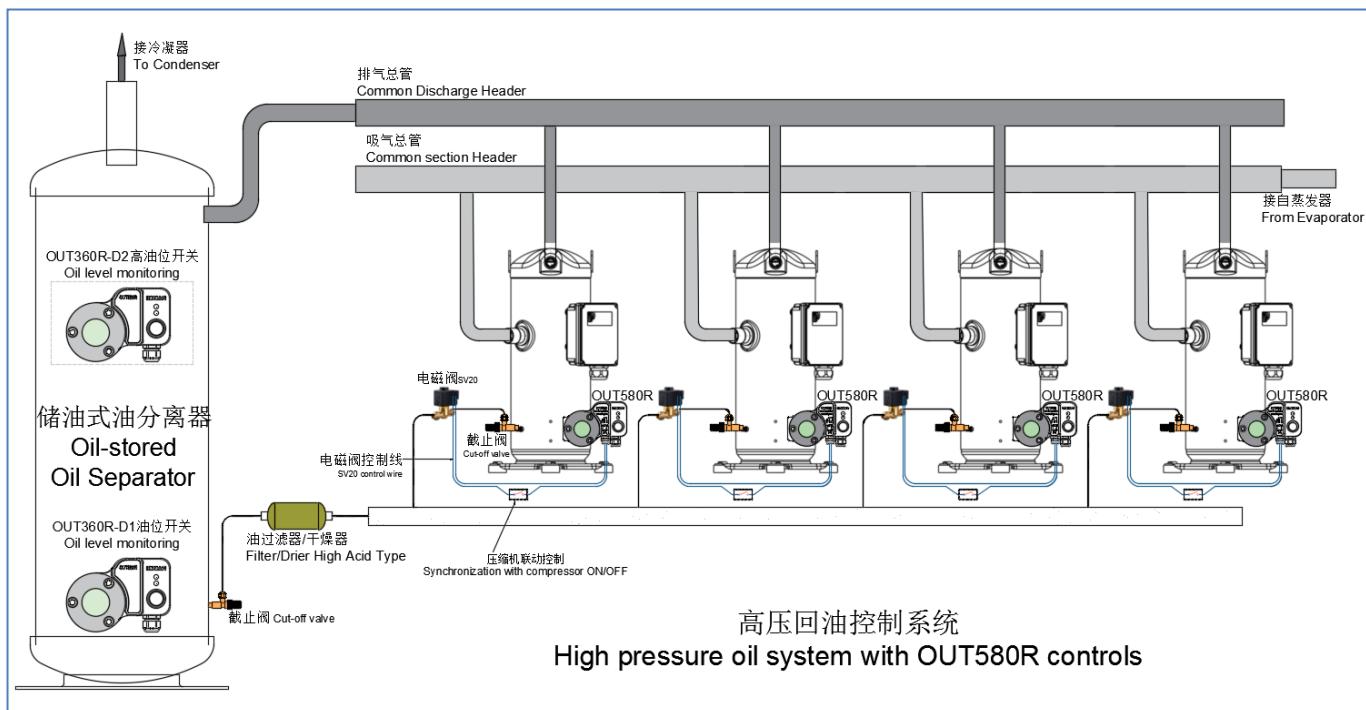

The branch pipe connected with the inlet of the solenoid valve should use Φ6.35x0.8 copper pipe. Solenoid valve outlet and compressor oil injection port connection can choose Φ4mm above the inner hole hose.

2、压缩机注油口适宜选择与曲轴油箱直通的接口，并应该比油视镜口至少高 5mm 以上，请在注油口安装检修阀后再与电磁阀连接。可以选择在吸气阀上作为注油口。

The compressor oil injection port is suitable for the direct interface with the crankshaft oil tank. It should be at least 5mm higher than the sight-glass. Please install the maintenance valve at the oil injection port before connecting with the solenoid valve. It can be selected as an oil injection port on the suction valve.

3、定期检查摆臂跟随油位的灵活性，发现带磁性的摆臂被黑色油腻吸附时请及时清理。

Periodically check the flexibility of the magnetic float to follow the oil level, if the magnetic float is adsorbed by black grease, please clean it in time.

友情提醒 Caution

在正确安装及使用前提下发现产品质量问题，请寄回 GOLDAIR 公司进行保修或者更换，保修的期限按照合同约定，没有约定的为 18 个月。GOLDAIR 不承担保修产品的来回运费，不承担因用户使用该产品对财产或人员的损害、停工或者任何直接的、间接的、偶然的、实际的、刑罚的、惩罚性的、附加的或余波所及的损害，或者因本产品的安装、使用或本产品无法使用导致的任何其它责任，即使 GOLDAIR 已被告知可能会发生此类损害。

If any product quality issues are found under the premise of correct installation and use, please send them back to GOLDAIR for warranty or replacement. The warranty period is as agreed in the contract, and if there is no agreement, it is 18 months. GOLDAIR shall not be liable for the round-trip shipping costs of the warranty product or for any incidental losses to property or personnel that may arise from the use of the product.
